EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with J.D. Evans on 6/1/2009

The application has been amended as follows: .

Claims 6-11 have been cancelled.

REASONS FOR ALLOWANCE

Claims 1-5 and 12-13 are allowed.

The following is an examiner's statement of reasons for allowance:.

The closest prior art found is Gilbert et al (US 3594418).

Gilbert teaches the following diamine (see column 1, line 50):

Gilbert teaches aromatic diamine having hexafluoroisopropyl group. However, Claim 1 of the Application examined claims the following structure:

wherein A represents a single bond, oxygen atom, sulfur atom, CO, CH₂, SO, SO₂, C(CH₃)₂, NHCO, C(CF₃)₂, phenyl, or aliphatic ring; each of "a" and "b" independently represents an integer of 0-2; and 1≤a+b≤4.

The difference between Gilbert and the claimed structure is that the Application examined claims a monomer having two phenylene groups, whereas Gilbert teaches only single one.

The structures above are not analogous and there are no suggestions in Gilbert's teaching to use a monomer having two phenyl moieties. Thus, there is no motivation for an artisan to replace Gilbert's monomer with a molecule, having two phenyls.

Yamanaka et al (JP 2006206879, published on 8/10/2006, cited with equivalent US 2008/0221298) teaches the following monomer (see Abstract):

, [Chemical Formula 29]

The differences between claimed structure and Yamanaka 's monomers are the following :

1. Both Yamanaka's amine groups attached to one phenyl molecule, whereas the claimed structure claims amine groups joined to two phenyl groups;
2. Yamanaka teaches Ester group between phenyls, whereas Claim 1 does not claim this link (see discussion above).

In addition, the earliest priority date for Yamanaka is 8/10/2006, whereas the Application examined claims priority from PCT/JP2005/018839 filed on 10/13/2005.

Turner (WO 03/089404, cited in IDS) teaches the following structure (see page 2, line 10):

where "n" is between 0 and 6, R5 is amine (see page 2, line 30, where R5 is NR10R11 and R10, R11 are Hydrogens) and X is OH (see Page 2, line 15).

The difference between claimed structure and Turner is that the reference teaches Naphthalene-based material, whereas the Application claims isolated phenyl moieties.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GREGORY LISTVOYB whose telephone number is (571)272-6105. The examiner can normally be reached on 10am-7pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
